Cronreset Perl Script (Windows) "Watchdog" (Webresetter)

Dieses Skript dient als Totmannsknopf; es sollte alle vier bis fünf Minuten per cron job gestartet werden. Bleibt das aus, wird nach diesen fünf Minuten ein hard reset ausgelöst.

This script acts as a deadman's button, e.g. for the webresetter server itself. It should be started every four or five minutes via cron. Once started, the configured keyboard simulator will activate a hard reset.

System requirements:

OS: Windows NT 4.0, Windows 2000, Windows Server 2003

Perl 5.8, CPAN
